# Apache EventMesh in Huawei Cloud

Next Generation of Enterprise Cloud Native Event Centre: EventGrid

Alex Luo – Apache EventMesh PMC, Principal Engineer in Huawei Canada

# About Me

## Alex Luo

- ❑ Principal Engineer at Huawei Canada Toronto Research Institute
- ❑ 10+ years in Enterprise Software Development
- ❑ Leading the R&D team at Huawei, working on next generation of cloud middleware technologies, including EDA and EiPaaS
- ❑ Contributed to Apache EventMesh since March 2021
- ❑ Became Apache EventMesh Committer in March 2022, PMC in December 2022

Apache EventMesh  
& WeBank

Huawei Canada  
Toronto Research Institute

# CONTENTS

1. Apache EventMesh Community
2. EventMesh Architecture
3. EventMesh in Huawei Cloud: EventGrid
4. EventGrid Case Studies

Apache EventMesh Community

# Apache EventMesh Community

## First Chinese FinTech-founded Project made into Apache Incubator

- ❑ September 2019, EventMesh Project created by WeBank, a private Chinese Digital Bank founded by Tencent
- ❑ February 2021, EventMesh entered into Apache Incubator
- ❑ August 2021, EventMesh is included by CNCF Cloud Native Interactive Landscape as Serverless Framework developer module
- ❑ March 2023, EventMesh graduated into Apache Top-level Project (TLP)
- ❑ July 2023, EventMesh is included into Forrester China Cloud Native Ecosystem Research Report
- ❑ GitHub Star 1.4k+, Fork 500+, PR 2000+
- ❑ Totally 11 Releases, Latest release is v1.9.0

# Apache EventMesh Community

## Strong Industry & Community Supports

- ❑ WeBank uses EventMesh to support all core financial business scenarios
- ❑ EventMesh is used in multiple industries to support EDA service orchestrations, industries include: Internet companies, transportation, manufacture, Banking, Government
- ❑ EventMesh is used in production in major companies including Huawei Cloud, YongHui Superstores, Navimentum, and ZCY Gov. Many other companies are exploring more use cases.
- ❑ 300 contributors, 47 Committers, 15 PMCs  
from multiple companies: WeBank, Tencent, Huawei, eBay, Alibaba, Baidu  
from multiple countries: China, Canada, US and India

# Apache EventMesh Community

## Recognitions & Awards

- ❑ SegmentFauLt 2022 Annual List of China's Technology Pioneers
- ❑ Member of Trusted Open Source Community of CAICT (China Academy of Information and Communications Technology)
- ❑ OSCHINA Annual Open Source Project List

# Part 02

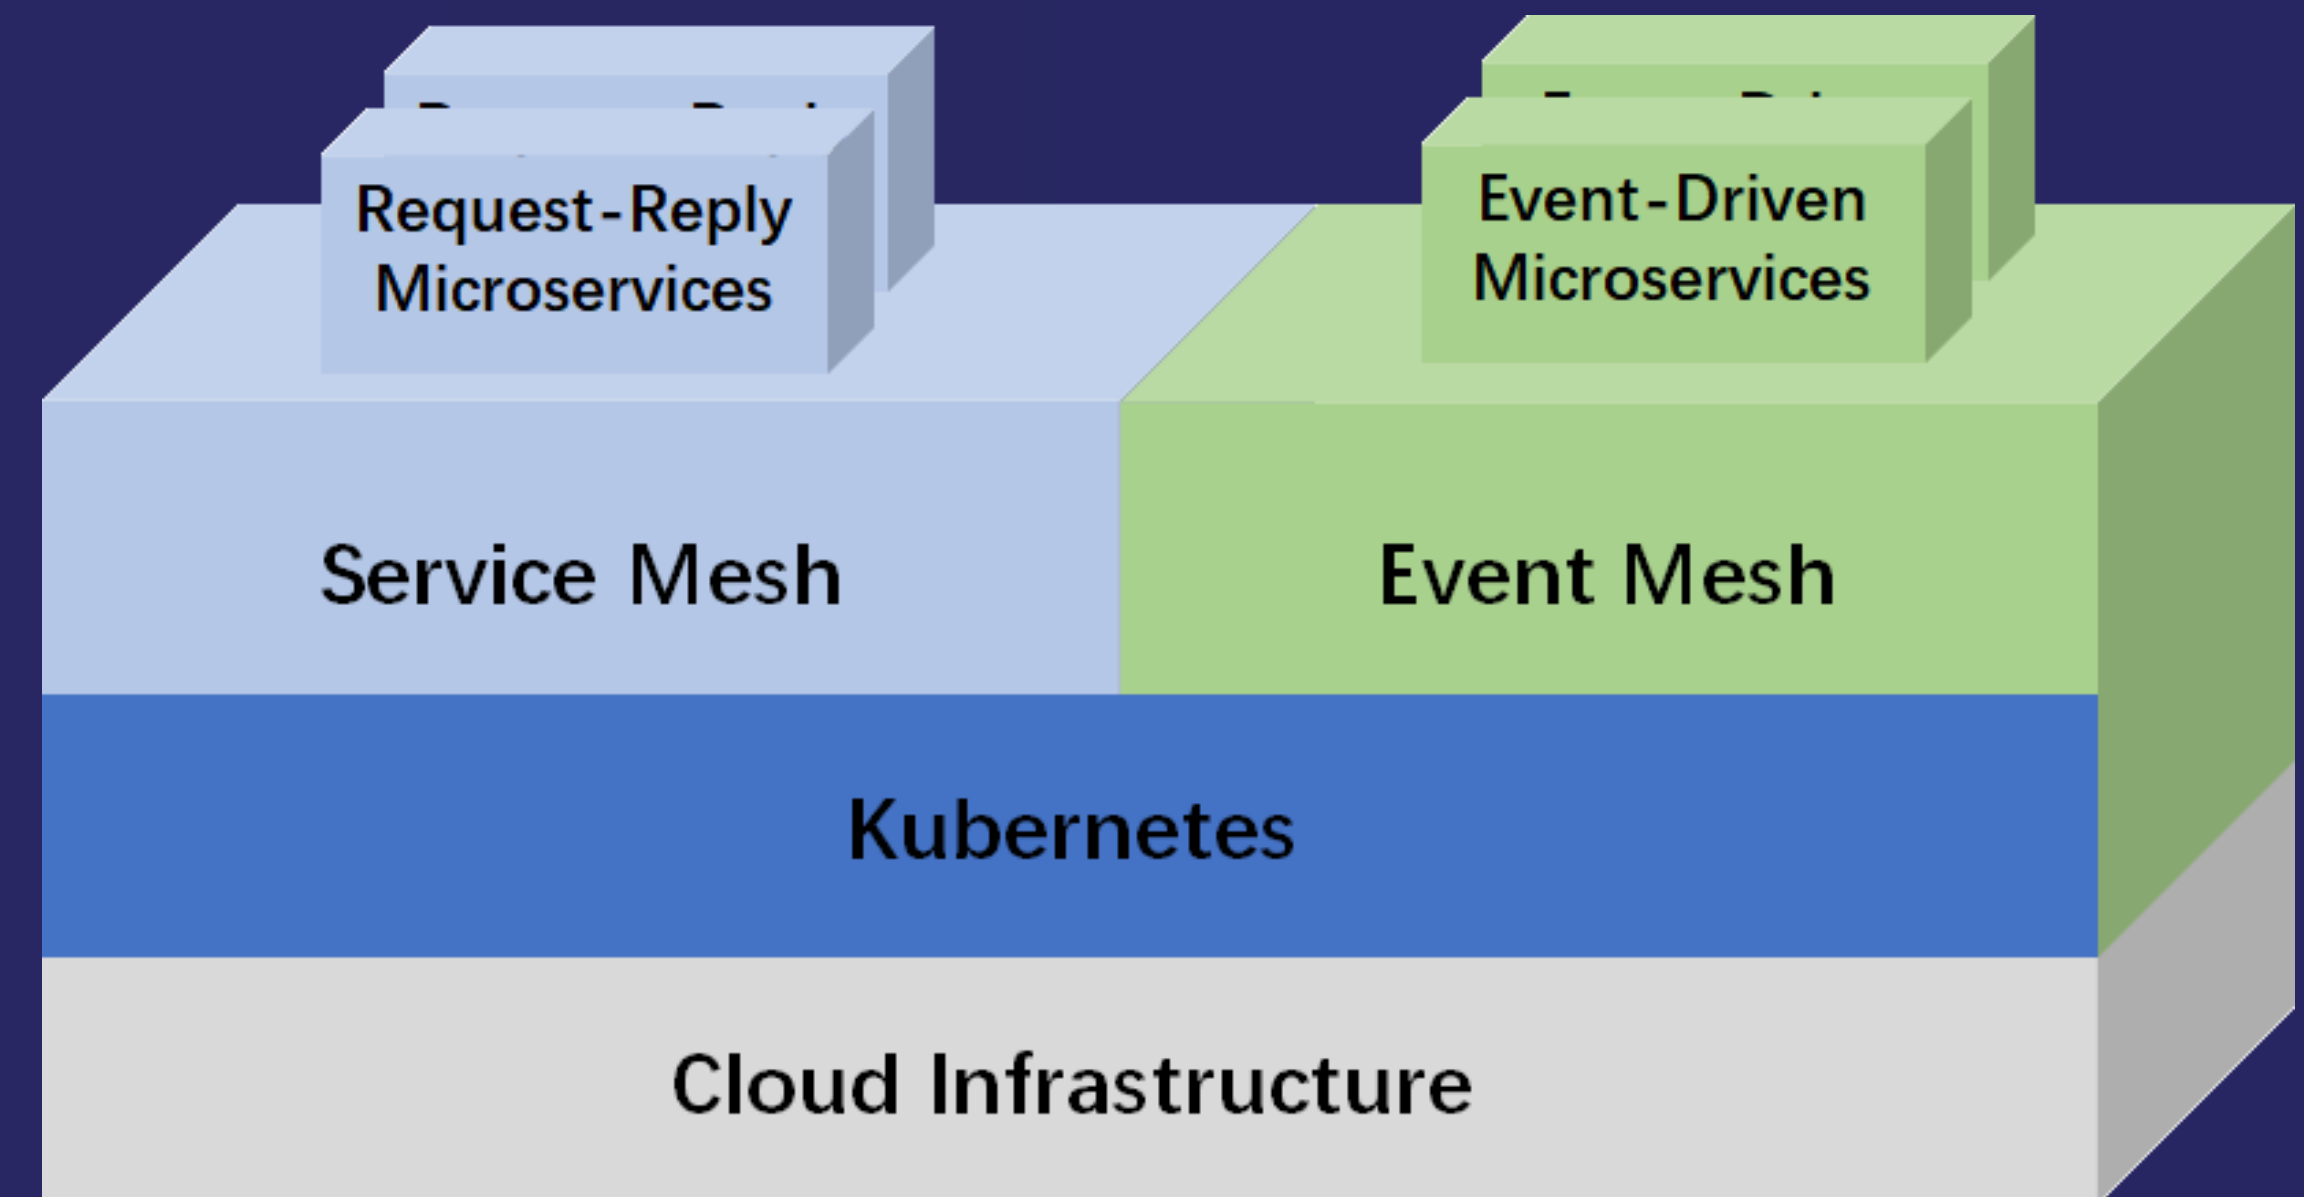

EventMesh Architecture

# What is Apache EventMesh

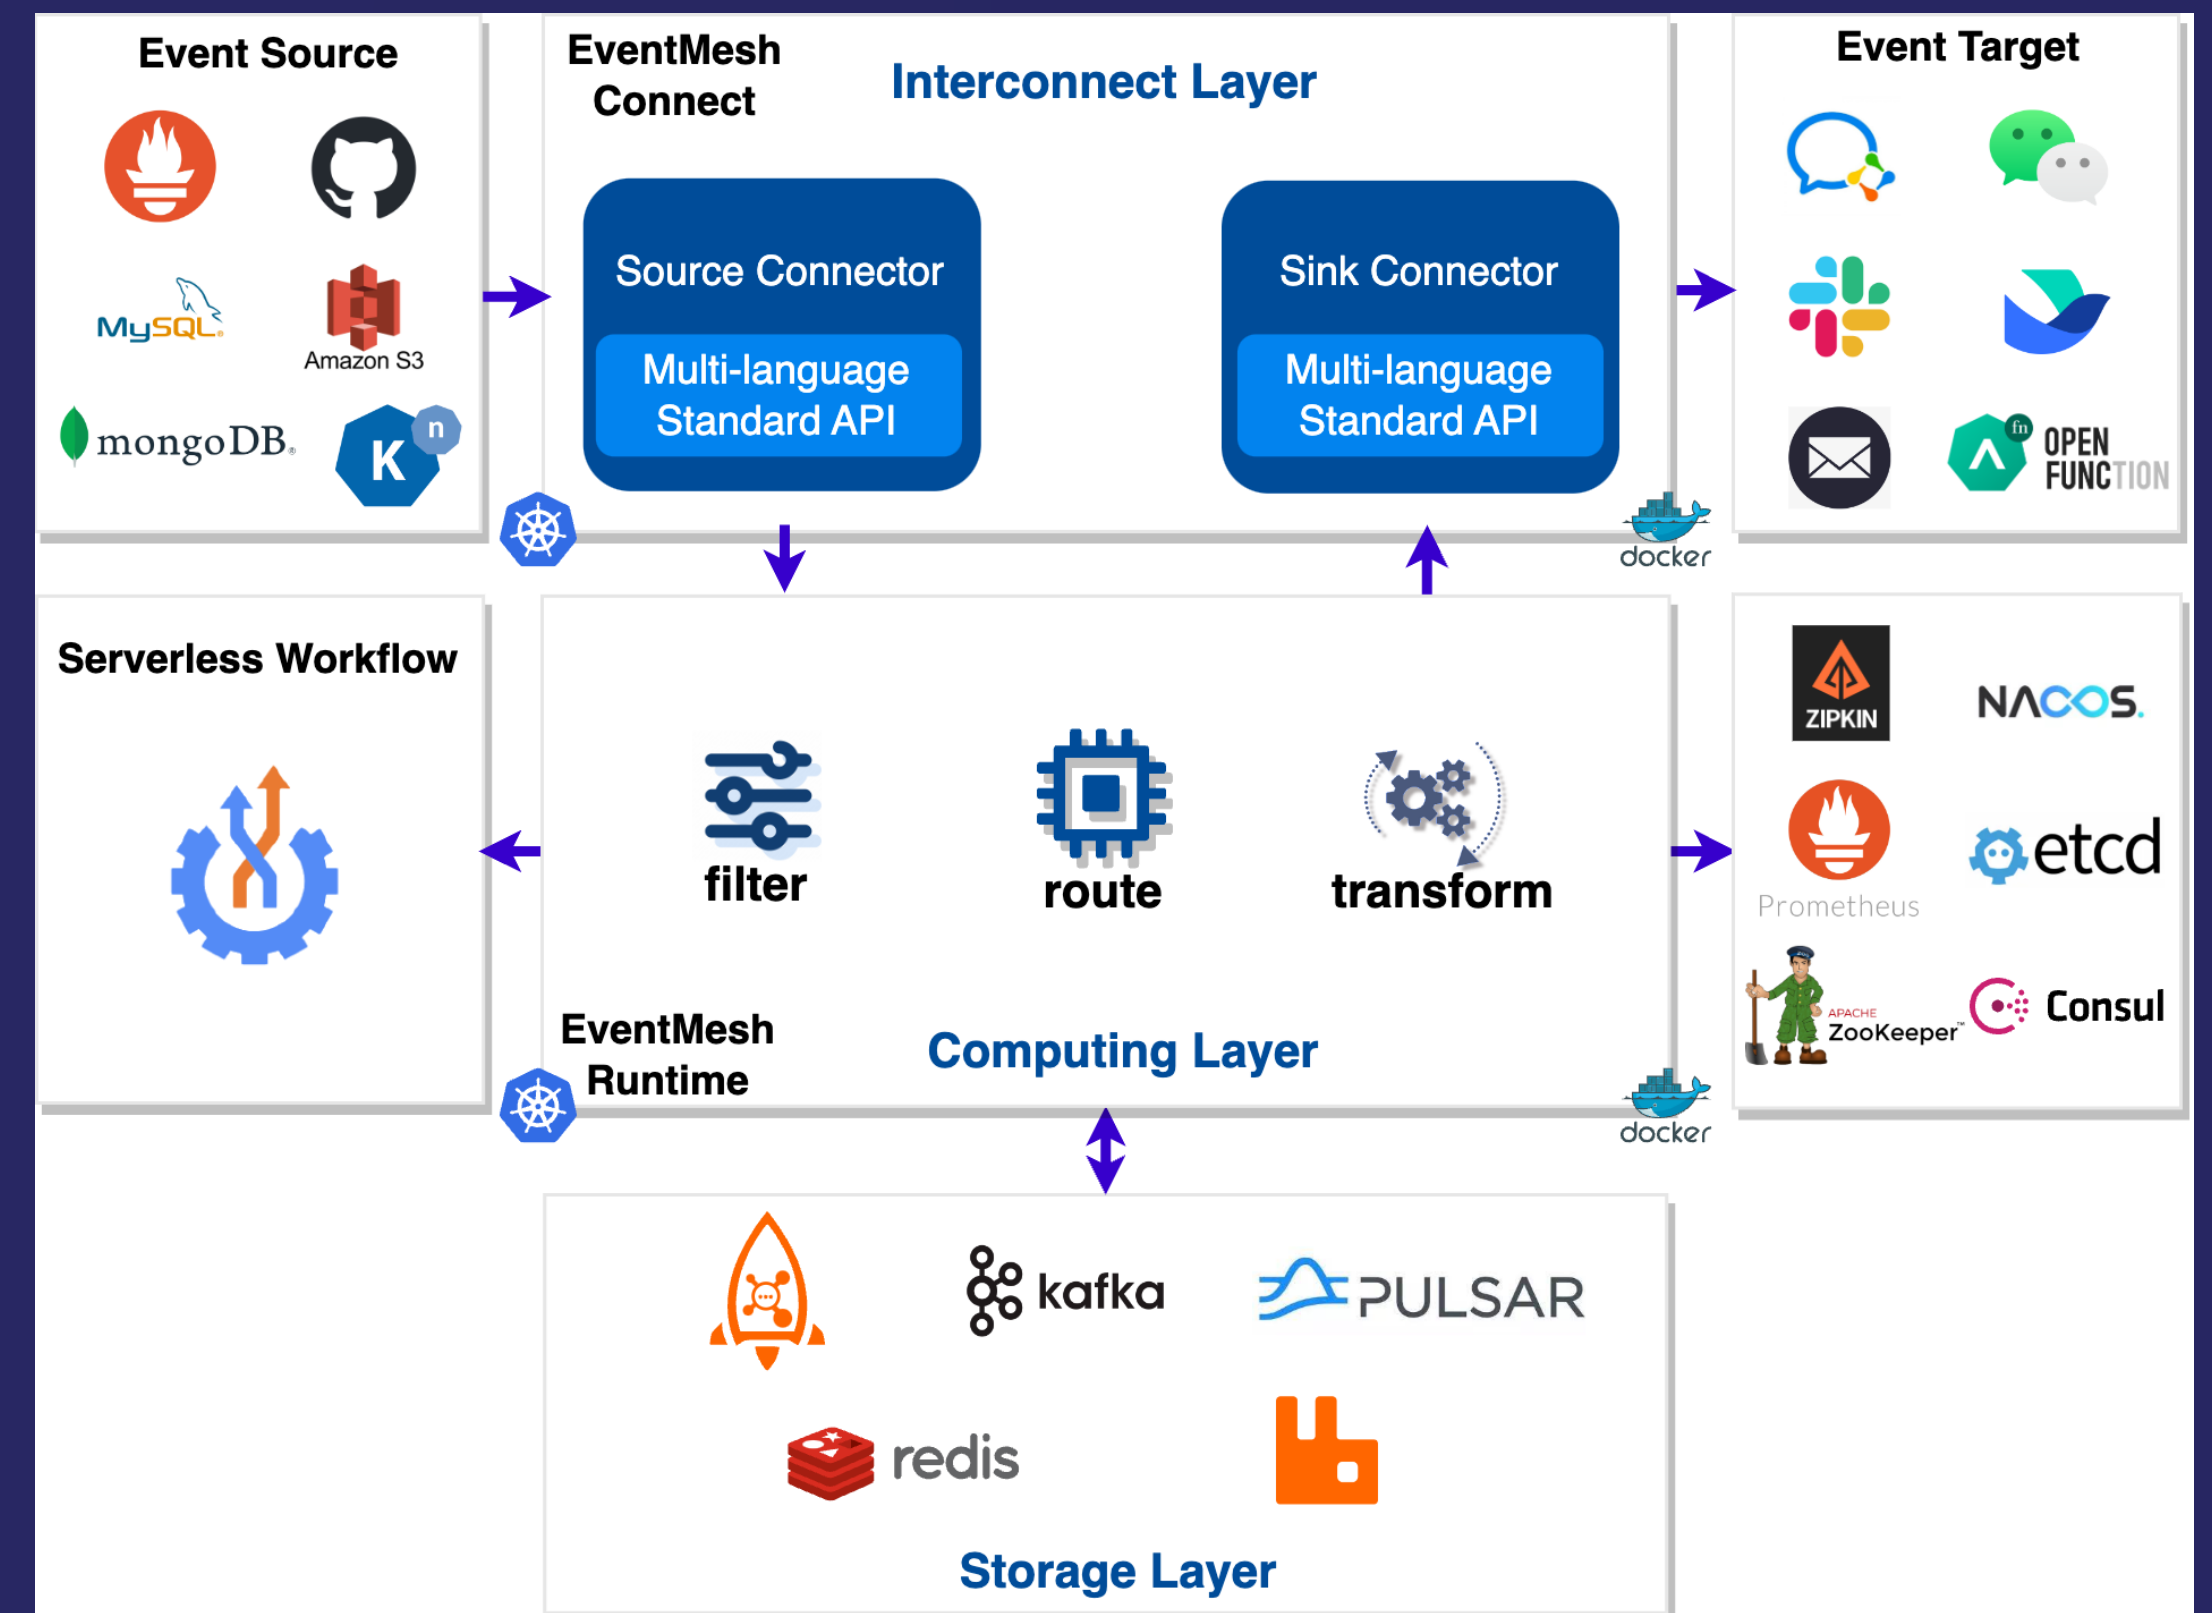

Next Gen of Cloud native, Serverless, Event-Driven infrastructure and middleware

- ❑ **Decouple** the applications from event/message backend (such as Kafka, ActiveMQ etc),
- ❑ Building distributed **Event-Driven** applications
- ❑ Deploy and used in Public Cloud and Hybrid Cloud

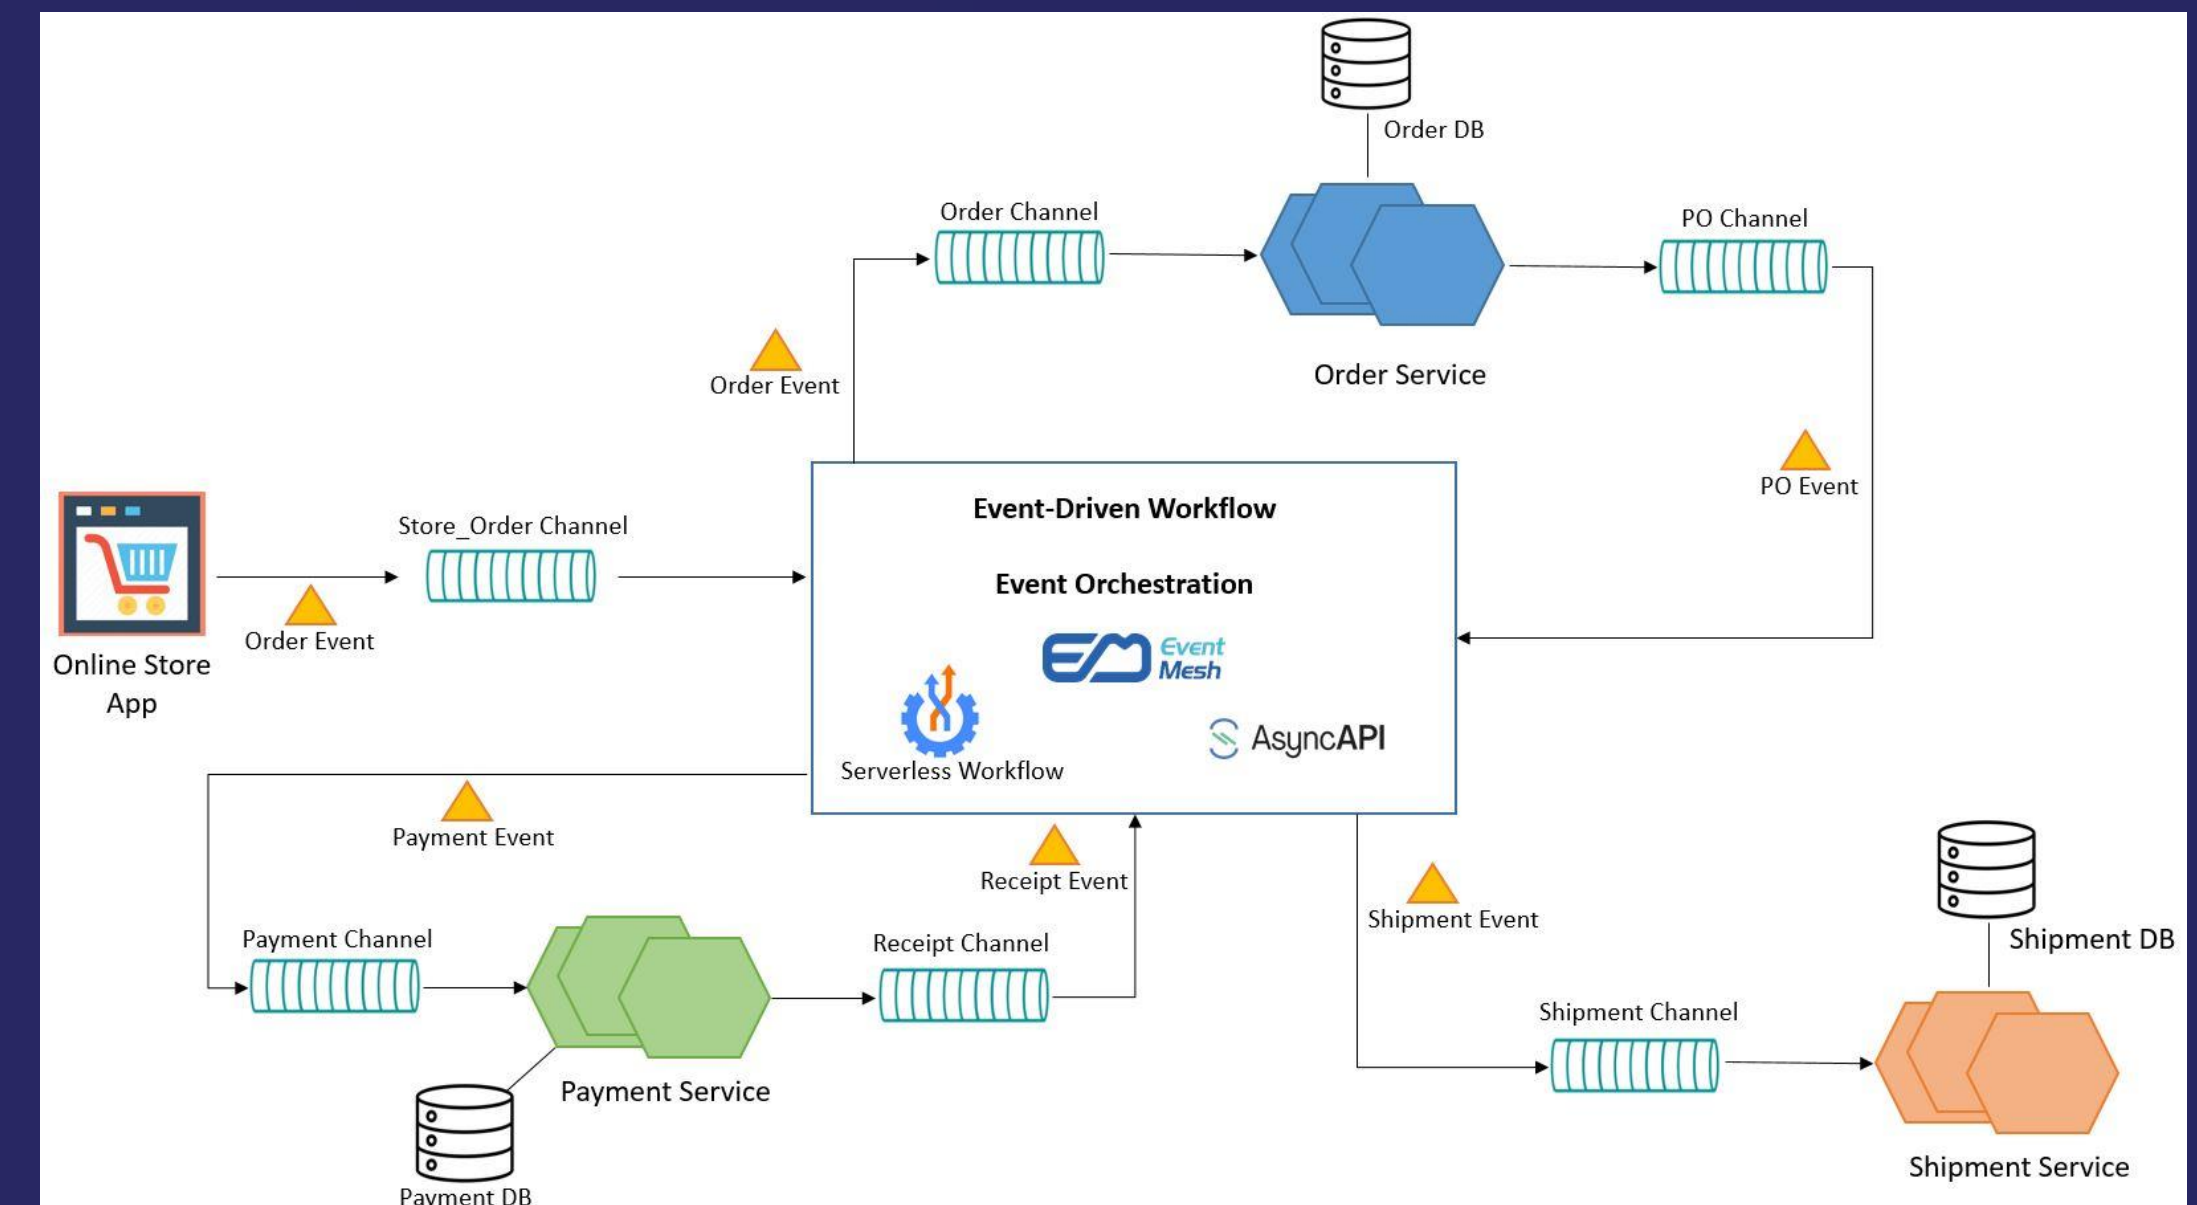

# EventMesh Architecture

- ❑ Separation of Event Compute and Storage
- ❑ Build on micro kernel **SPI Plug-in** based architecture
- ❑ Rich set of out-of-box event source & sink connectors
- ❑ Support Http/TCP/gRPC Transport Protocols
- ❑ Support Java, Rust, Golang Client SDKs

# EventMesh Workflow

- ❑ Provide high performance, and high throughput EDA workflow solution
- ❑ CNCF **Serverless Workflow** DSL to describe the EDA workflow
- ❑ Support **CNCF CloudEvents** Spec for Event modeling
- ❑ Eventmesh-Catalog for register the microservice **AsyncAPI**
- ❑ Eventmesh-Workflow for handling different workflow states:  
Operation, Event, Switch, Parallel and ForEach states

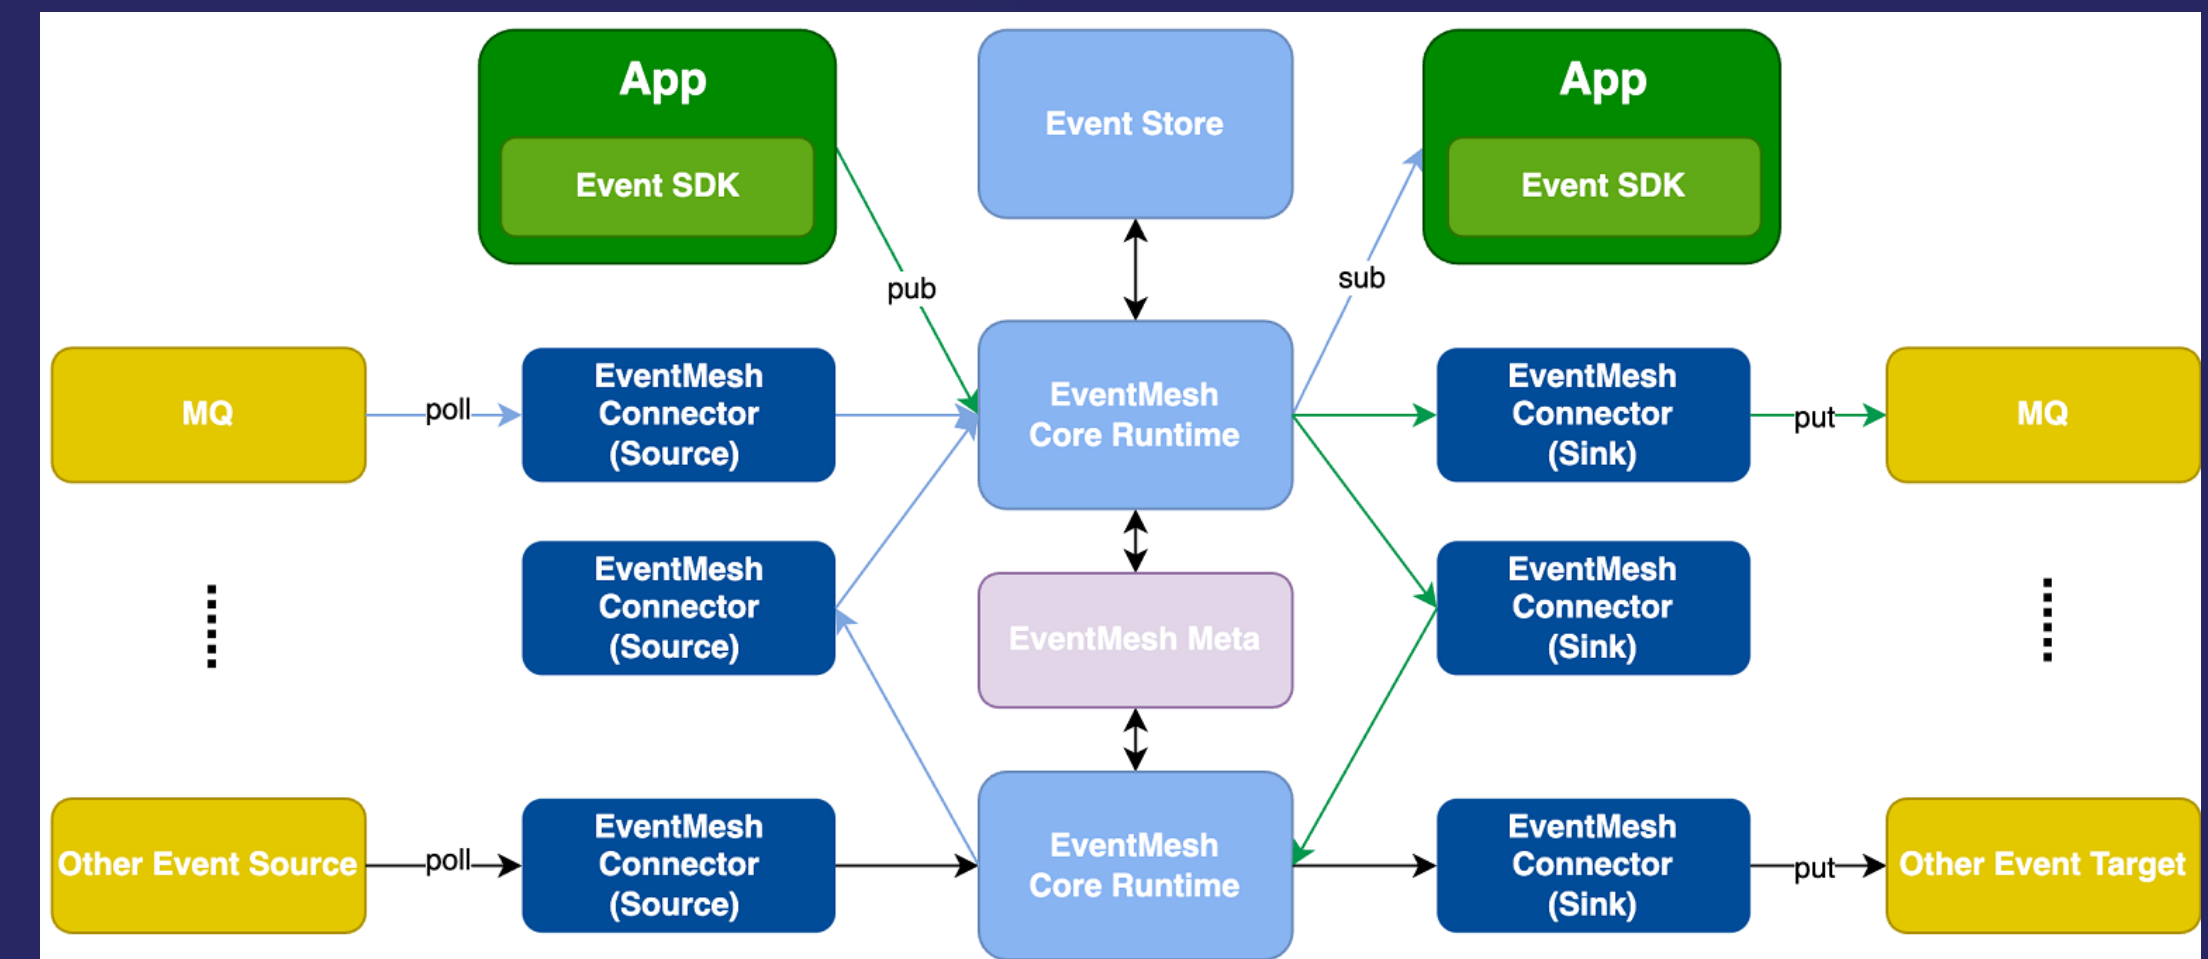

EventMesh Workflow

Available in v1.7.0+

# EventMesh Connectors

- ❑ Provide Source & Sink Connectors to connect to external services or data sources
- ❑ A source connector obtains data from an underlying data producer, and delivers it to targets as CloudEvents
- ❑ Source Connector can active polling events (MQ) or passive listening to events (Http Server / Webhook)
- ❑ A sink connector receives CloudEvents and write to the targets according to the business logics
- ❑ EventMesh Meta is the Registry for storing the EventMesh metadata for cross-instance communication.

EventMesh Connectors

Available in v1.9.0+

# Part 03

EventMesh in Huawei Cloud: EventGrid

# Huawei Cloud EventGrid

EventGrid is the serverless event hub service in Huawei Cloud, connecting Cloud services and applications through EDA

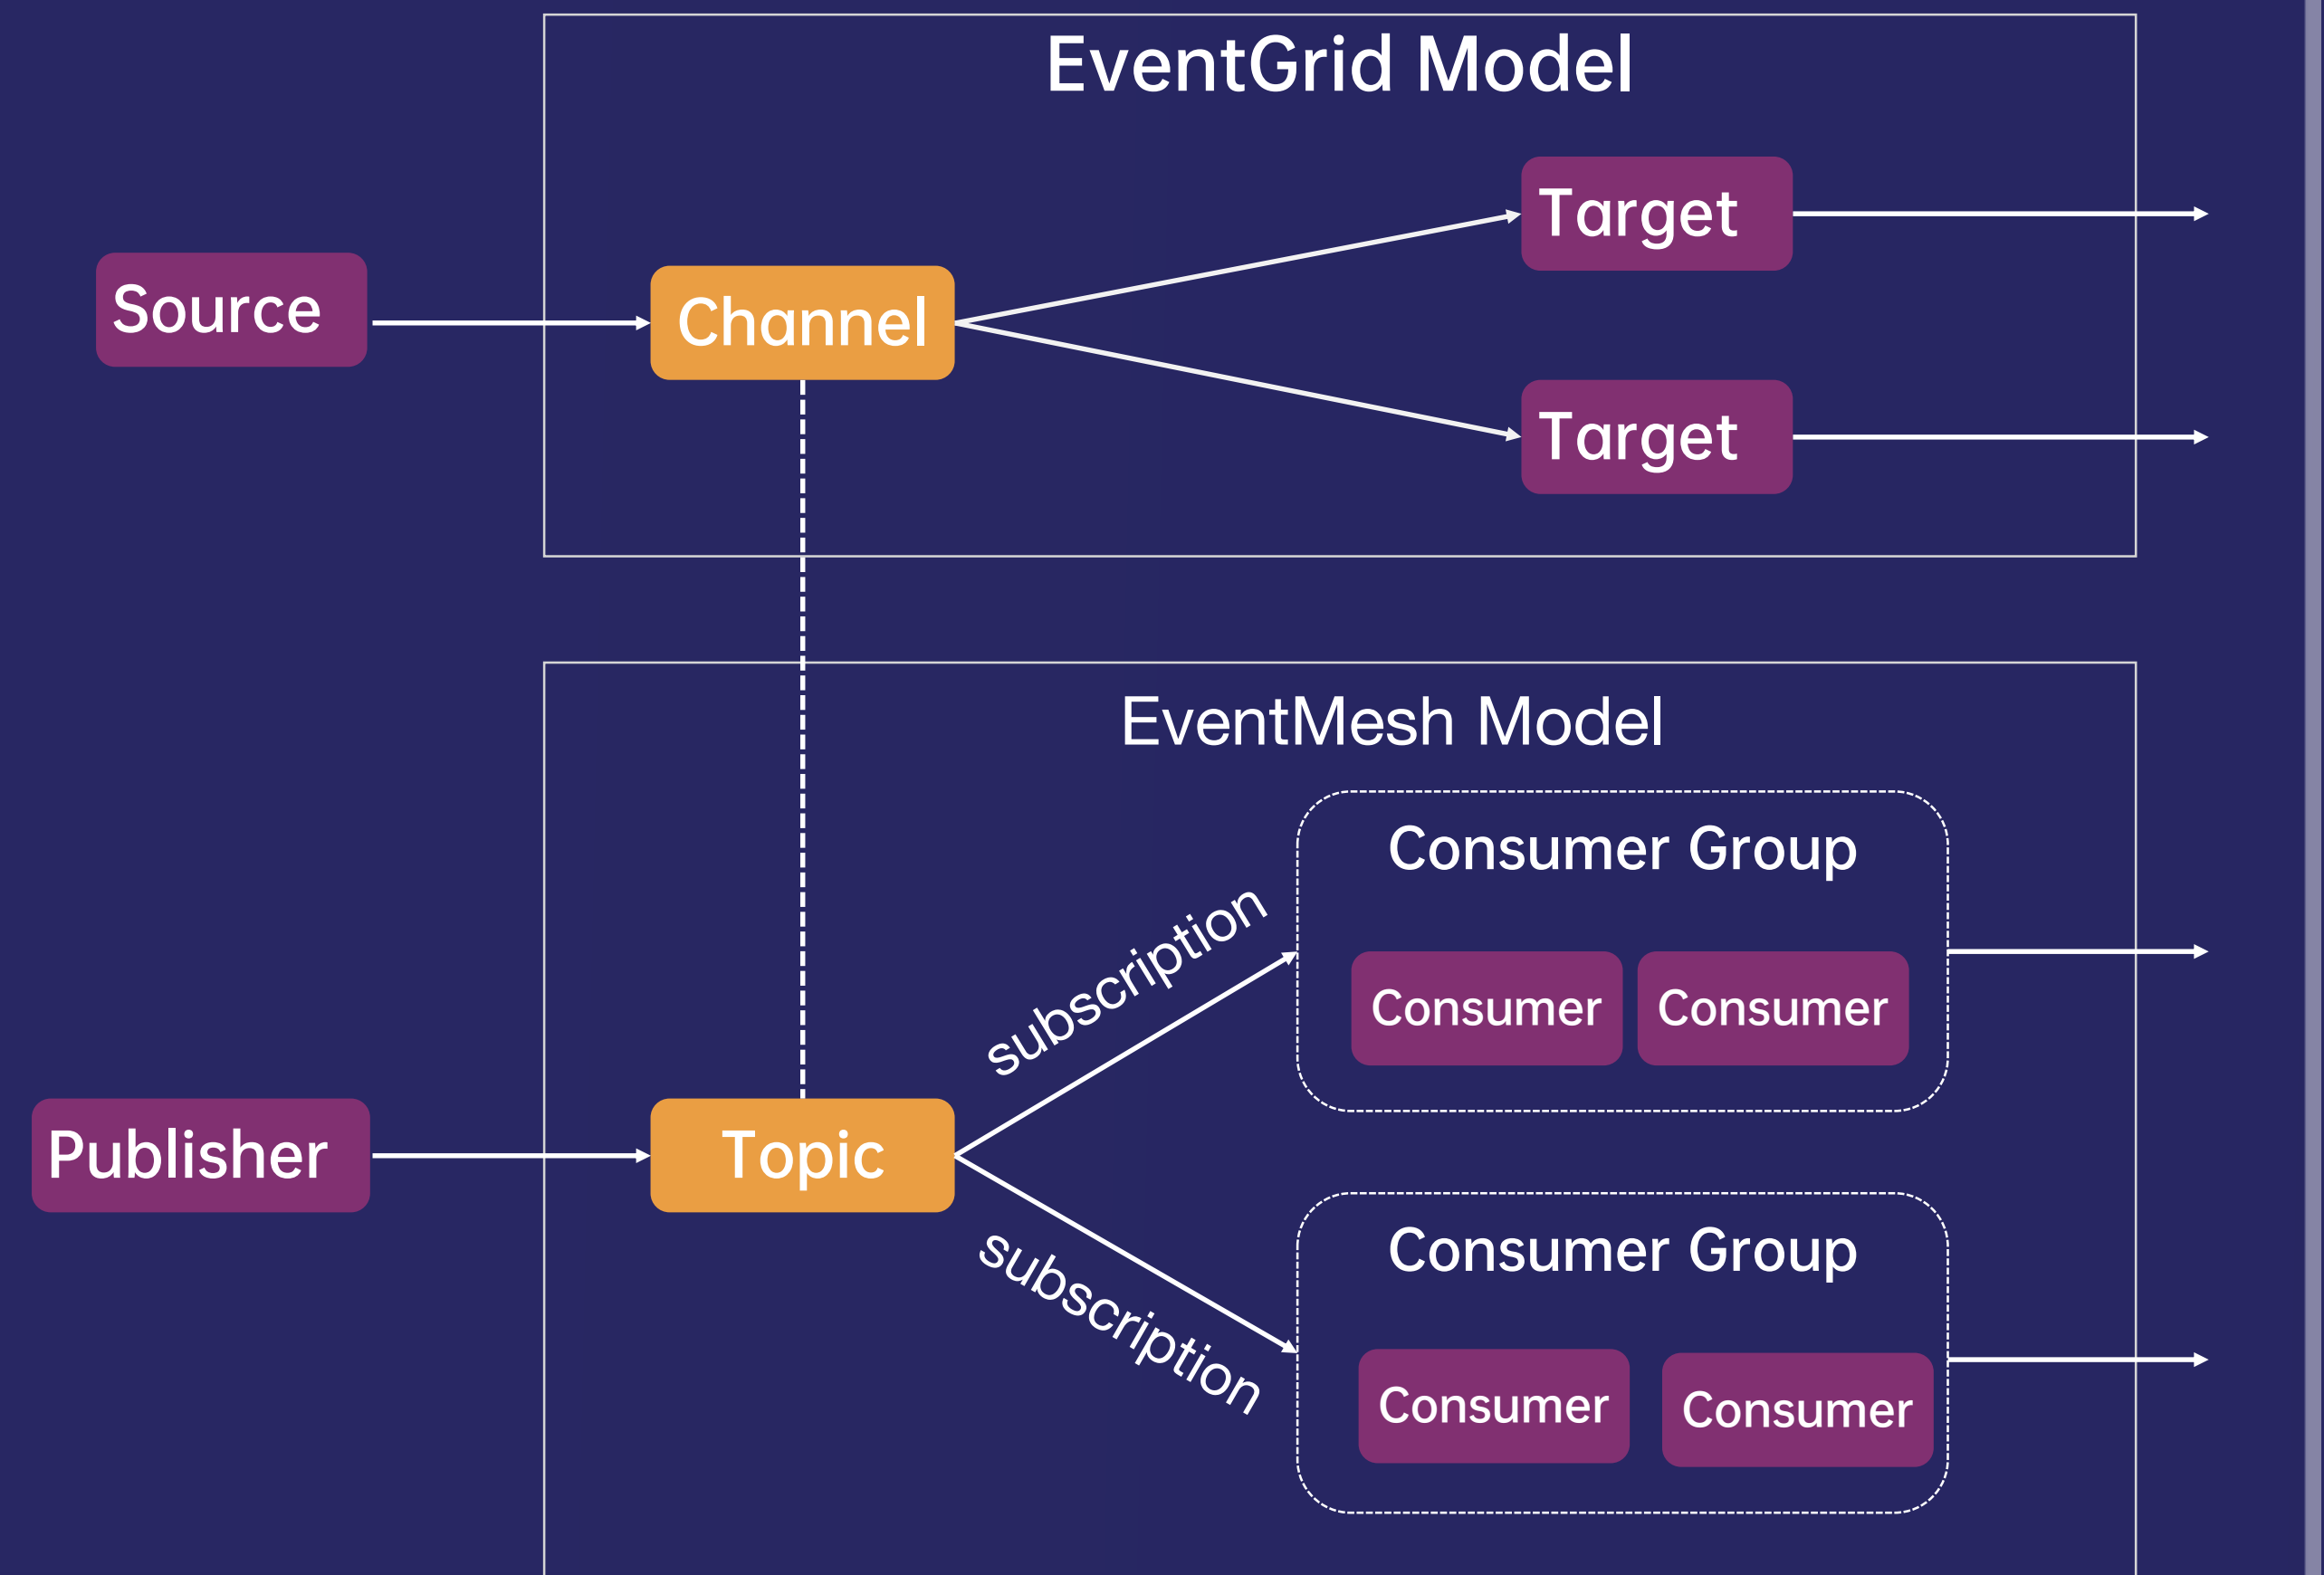

- ❑ Apache EventMesh as EventGrid Runtime
- ❑ Adding Observability: Console and Event Tracing
- ❑ EG runtime HA deployment as Cloud containers
- ❑ Event Connector deployment as Functions

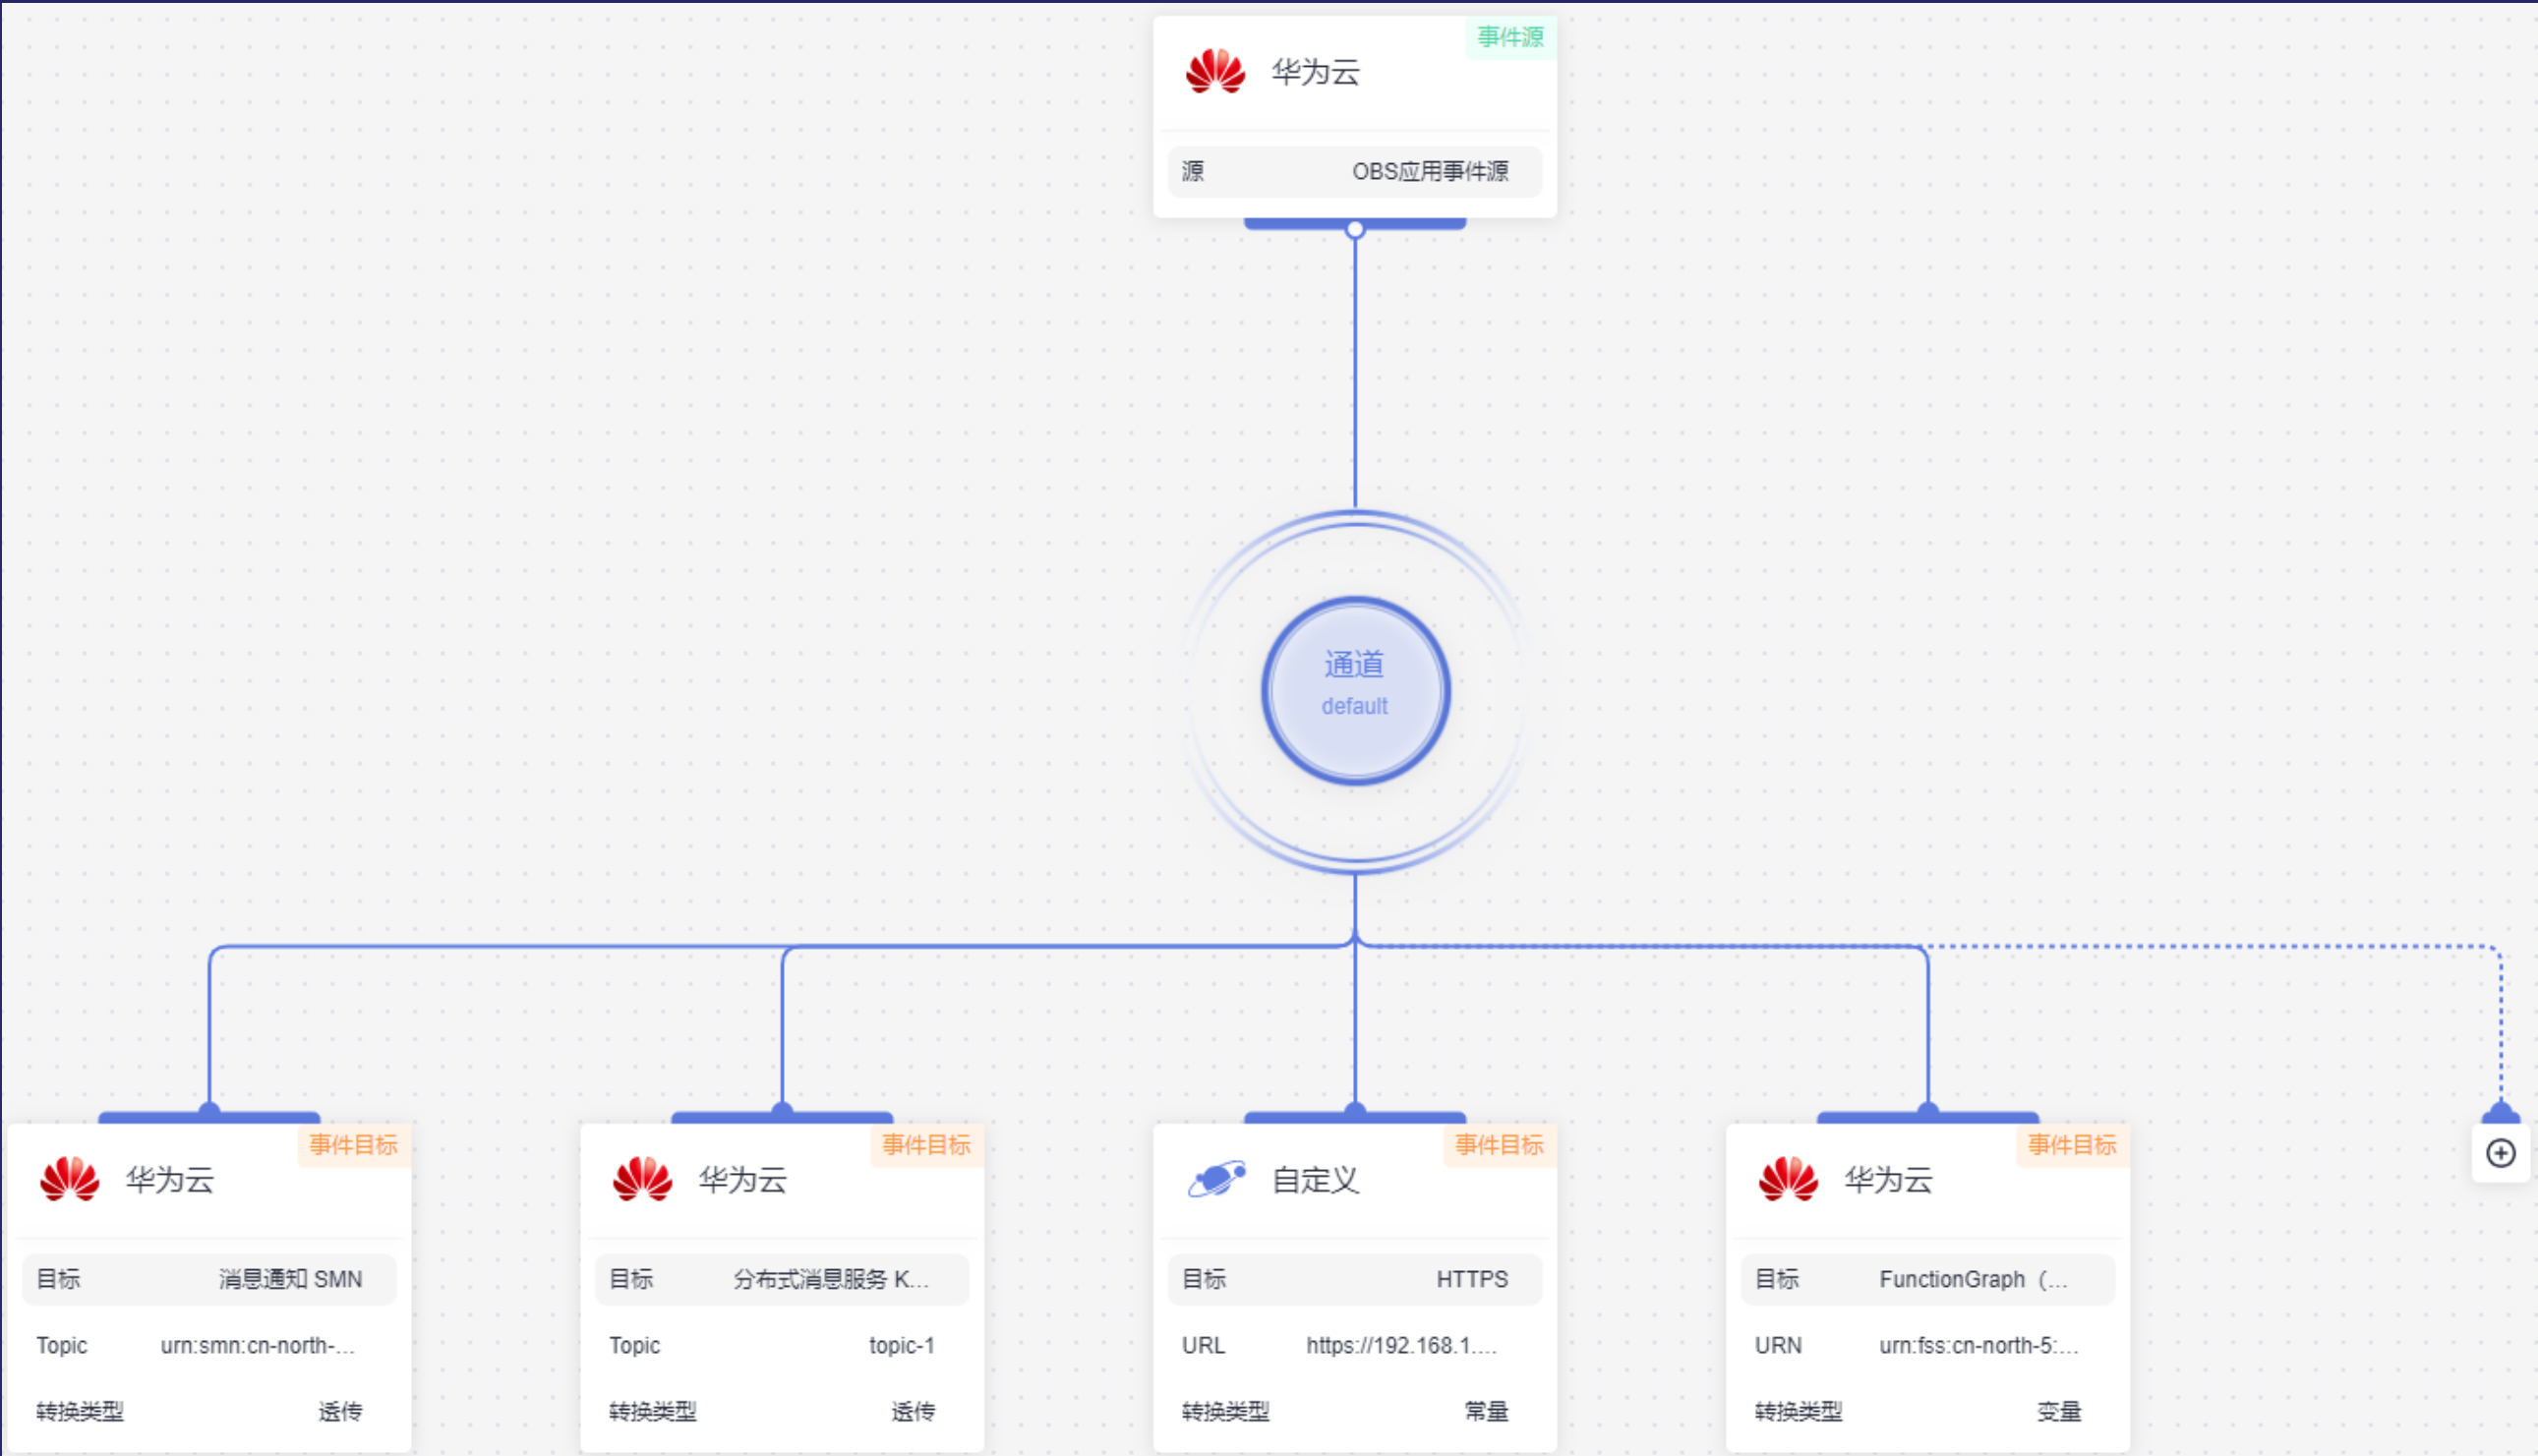

Huawei Cloud EventGrid

# EventGrid Data Models

- ❑ EventGrid Business Model mapping to EventMesh Runtime Model
- ❑ Separation of concerns
- ❑ Data Model decoupling

# EventGrid Console

## End to End Event Tracing

# EventGrid HA Deployment

Cell-based Deployment architecture, build on Huawei Cloud Container Service and Messaging Service

- ❑ EventGrid Deploy on Huawei Cloud CCE and DMS
  - CCE – K8S container infrastructure
  - DMS – RocketMQ Engine for Message Storage
- ❑ Each Cell deployment contains two instances of CCE and DMS
- ❑ Cell deployment to achieve resource isolation

# EventGrid HA Deployment

Optimize Event Storage Plugin for HA and Performance

## HA Deployment

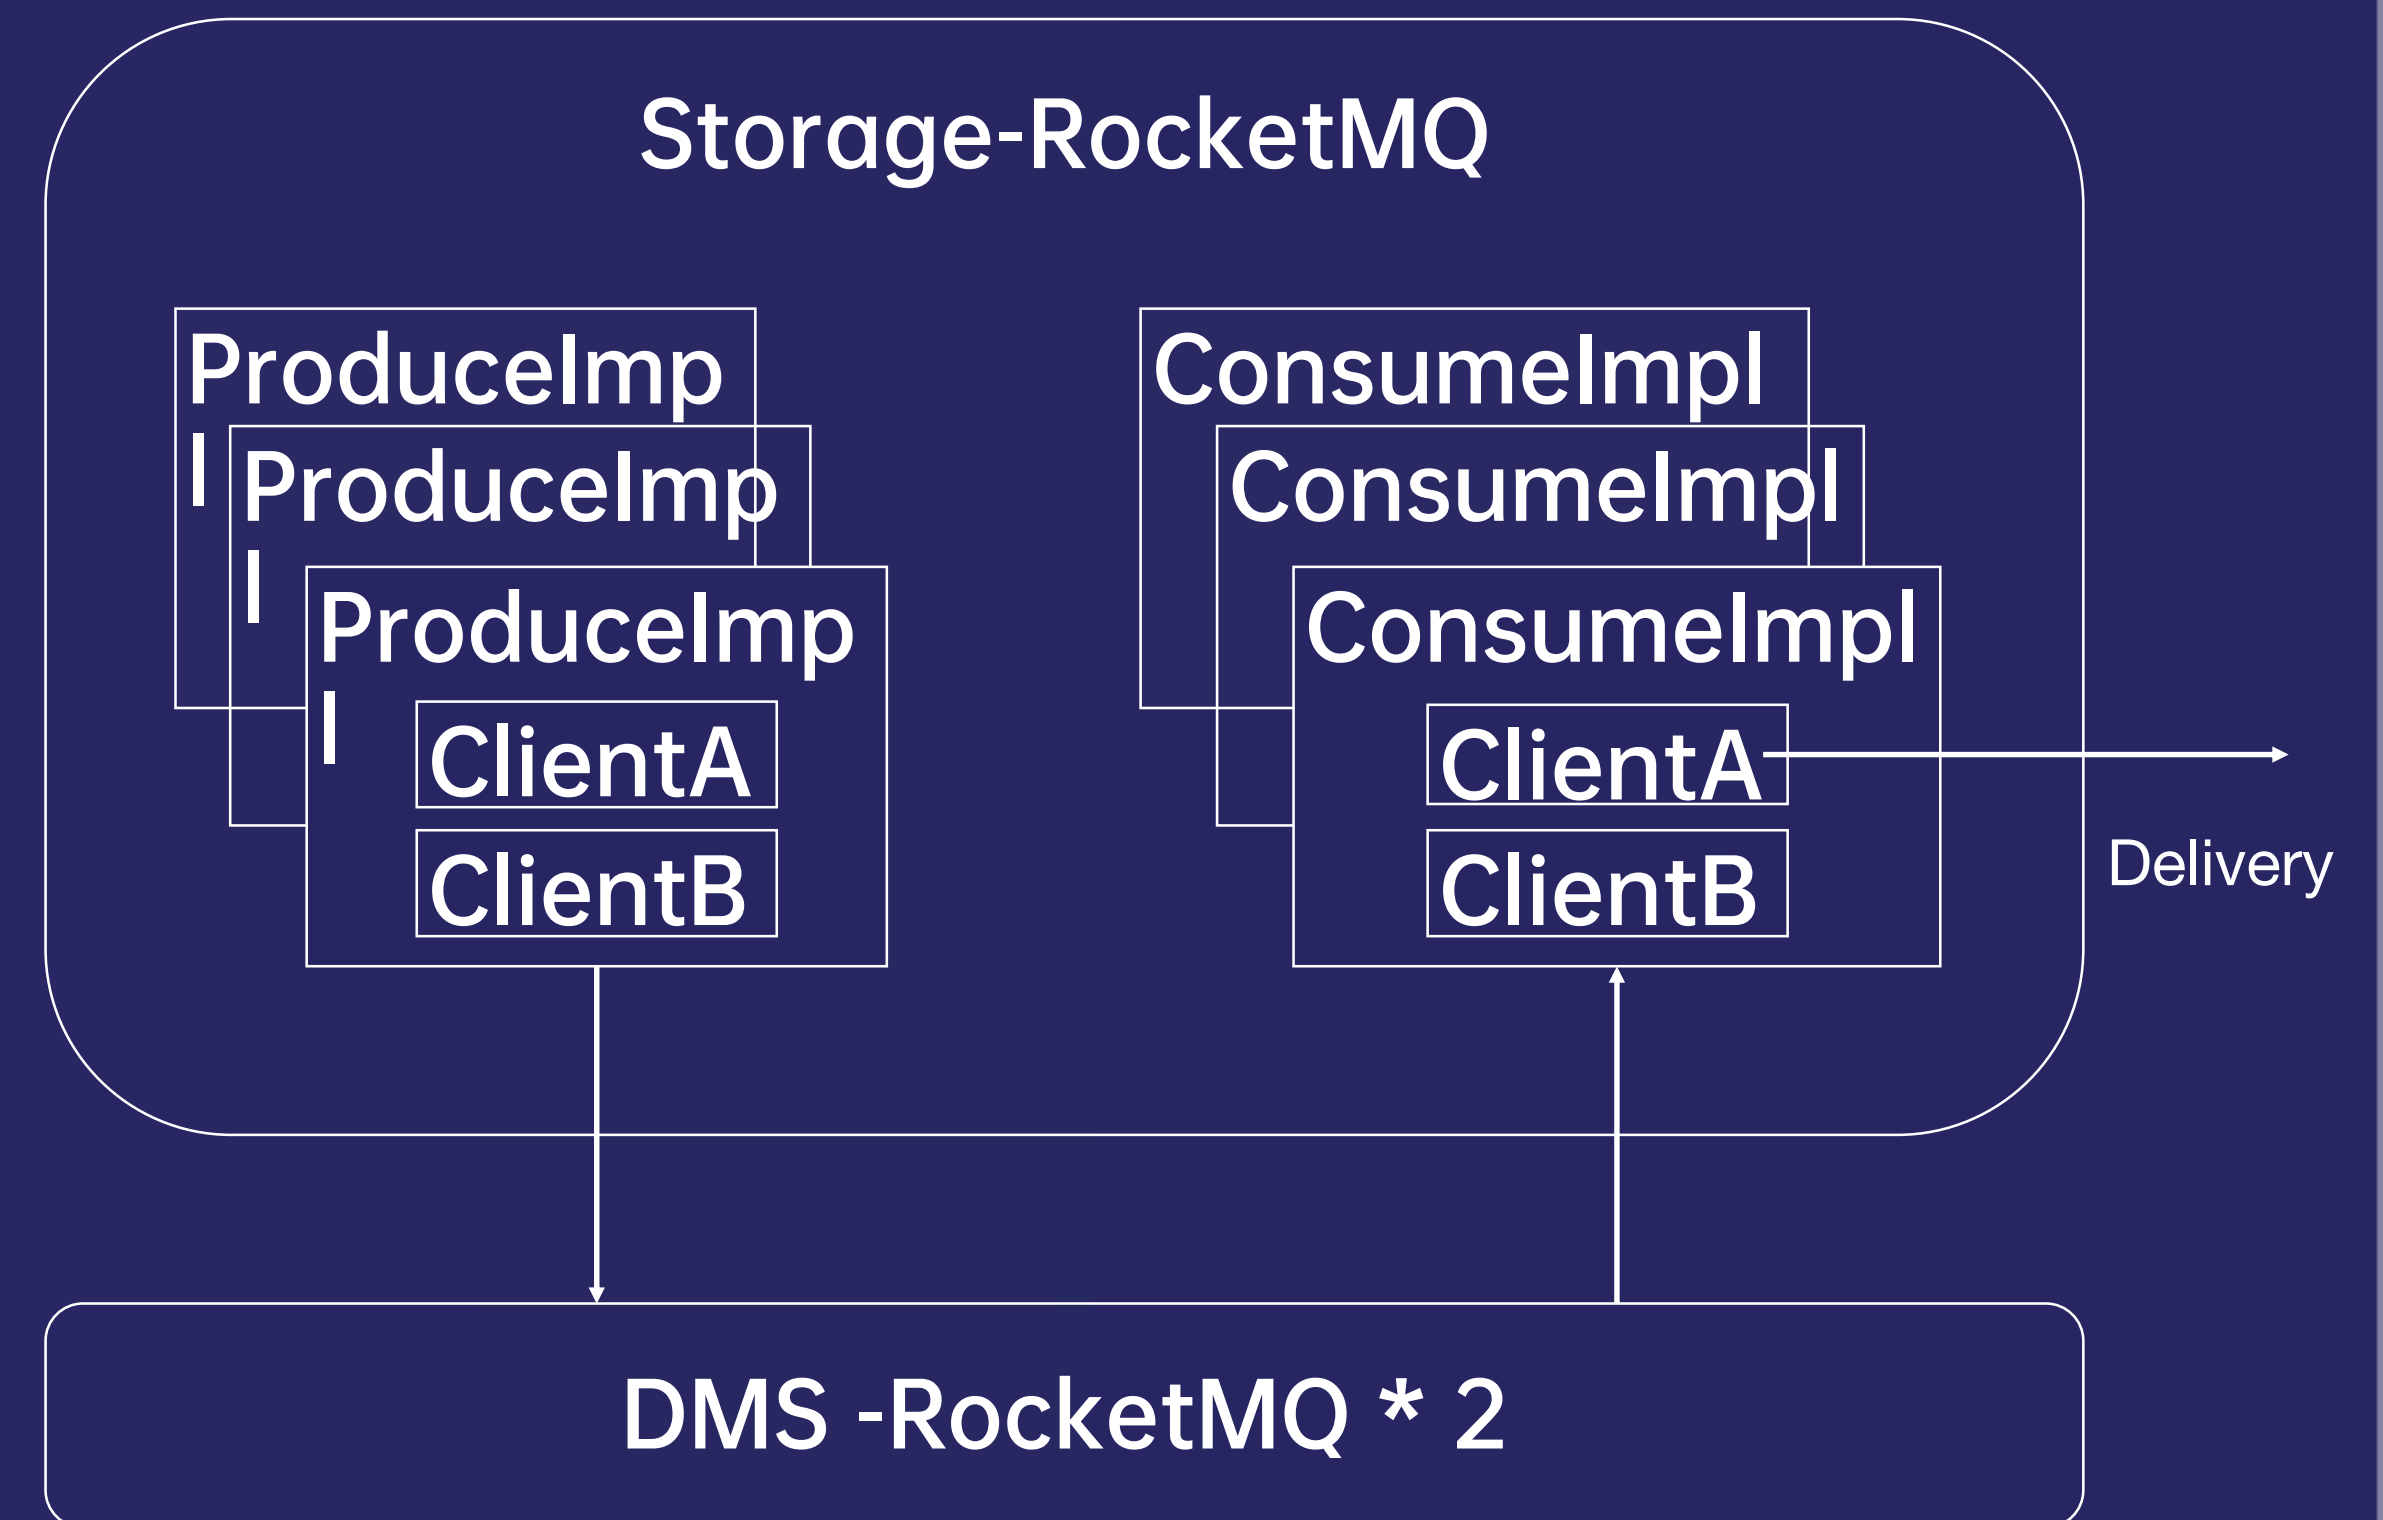

- ❑ RocketMQ dual instances deployment
- ❑ Support Storage Active-Active / Active-Passive mode

## Reliable Event Delivery

- ❑ Multi-thread event process and delivery
- ❑ Use RocketMQ Retry-Topic for event delivery retries

## Performance Optimization

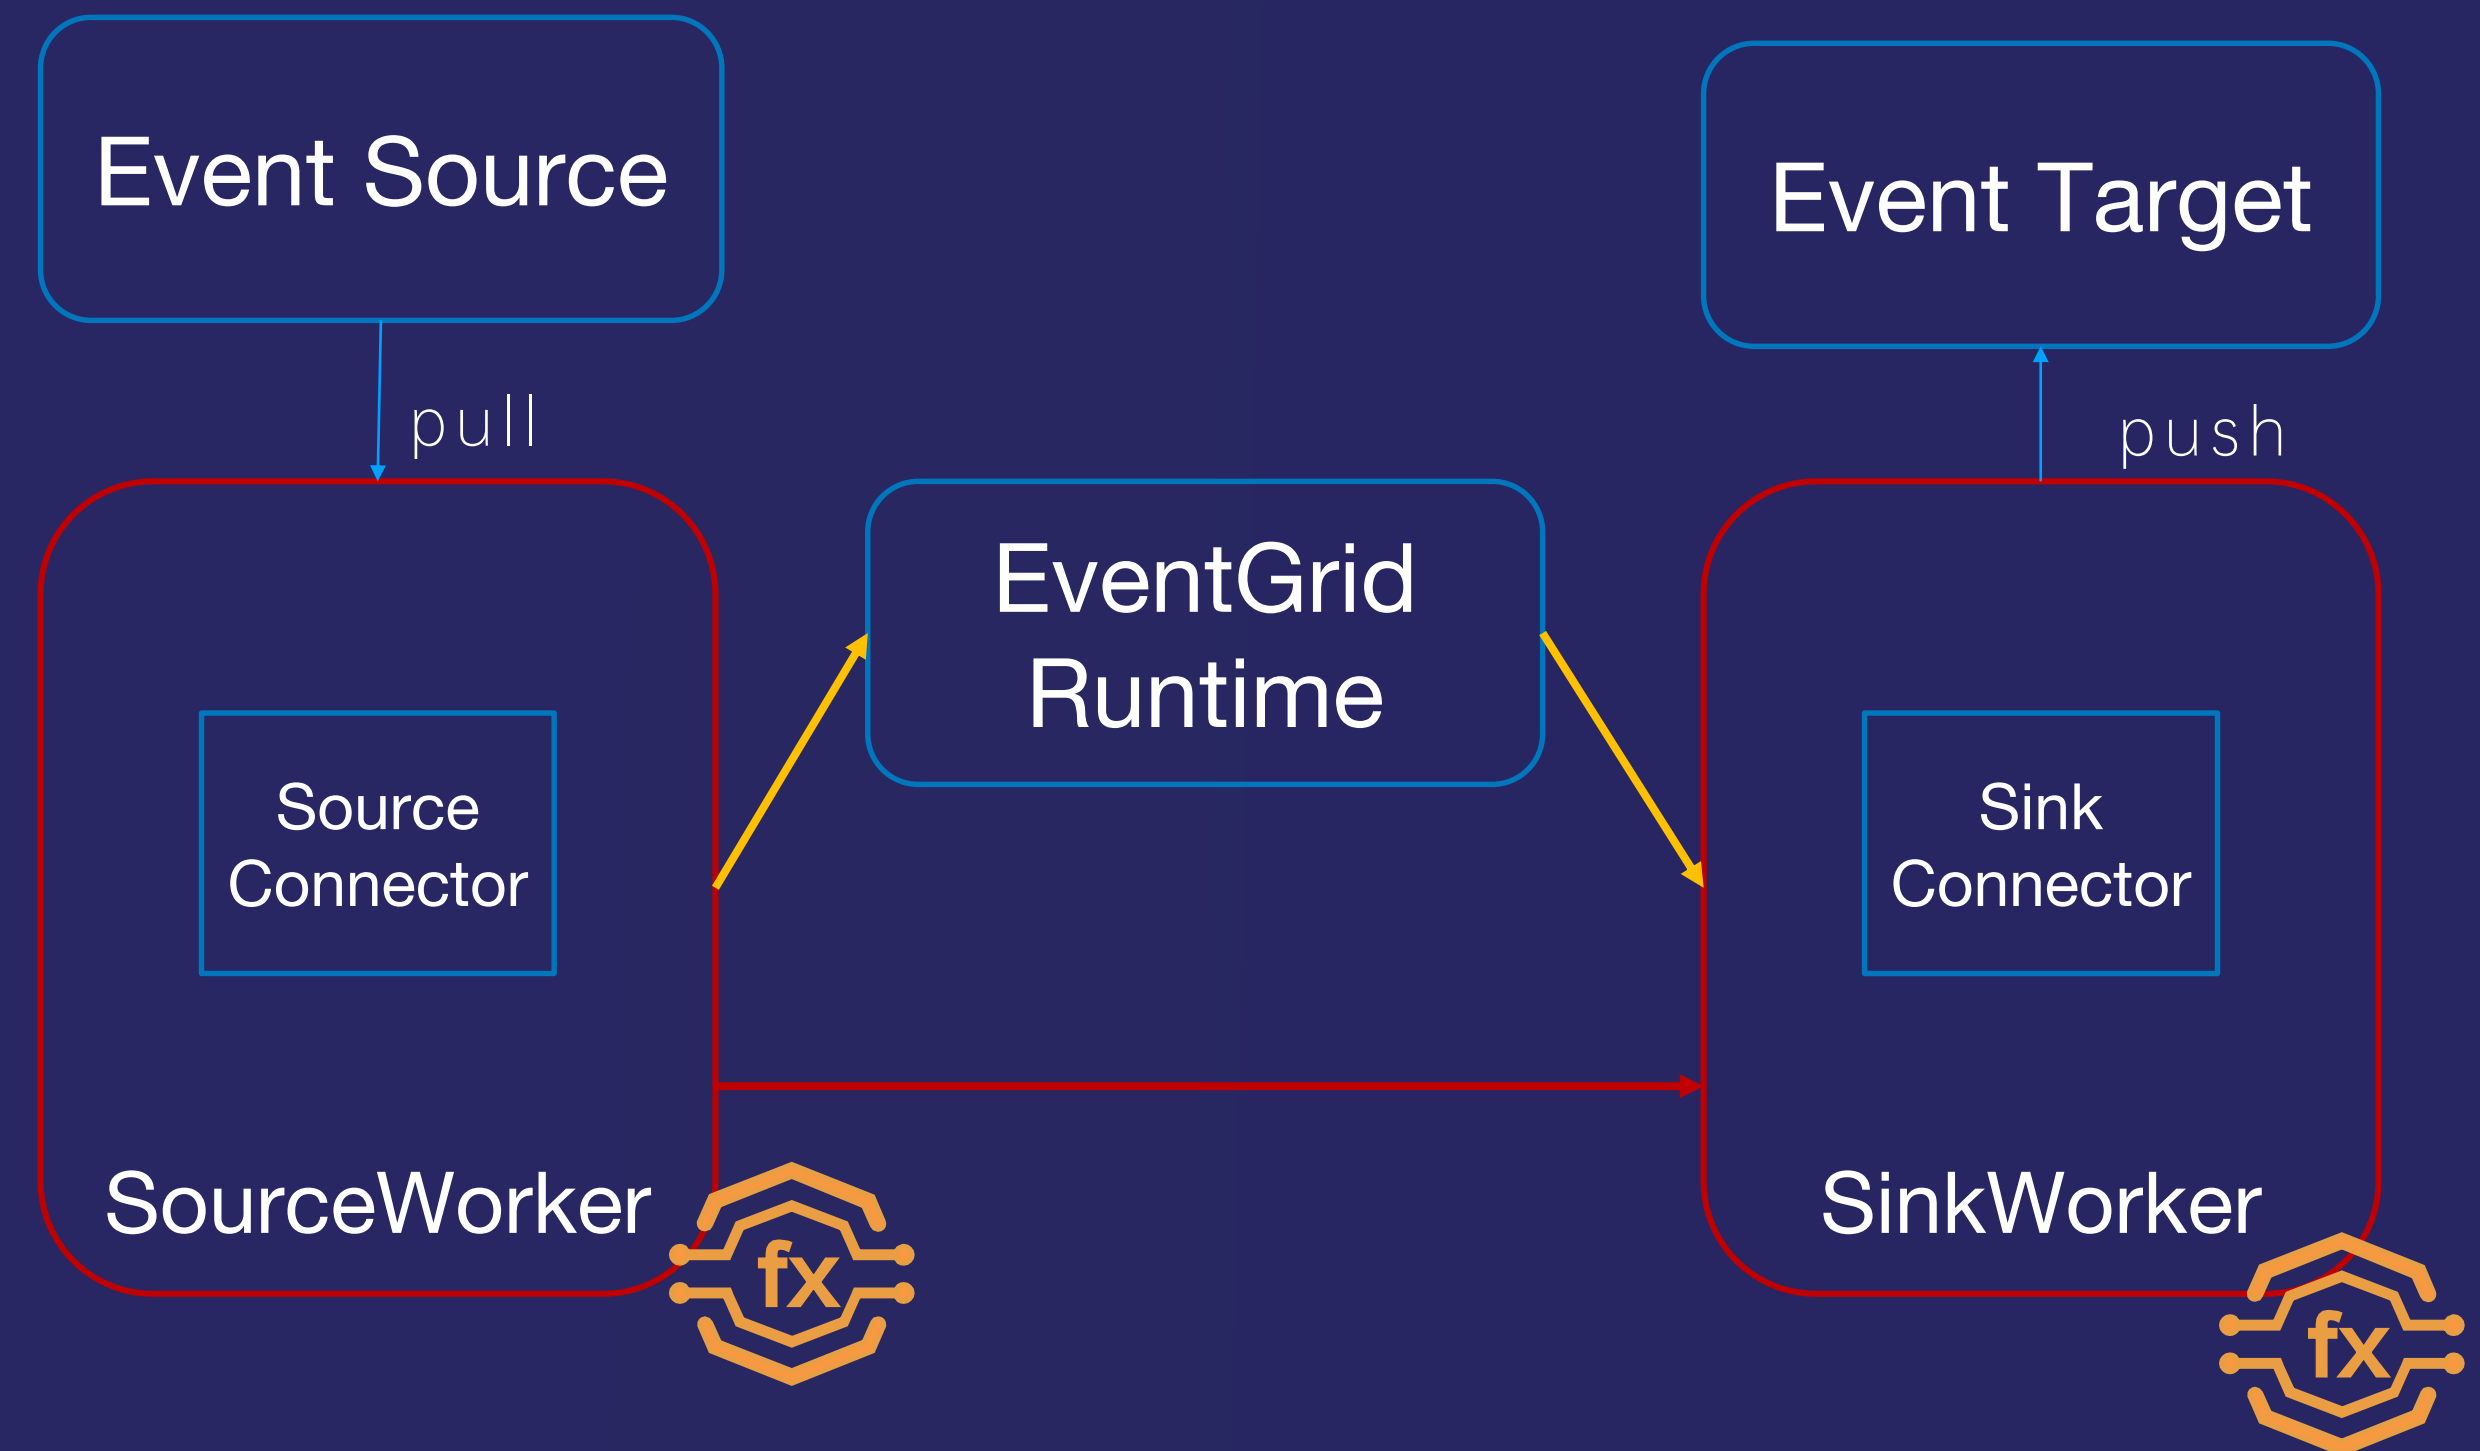

- ❑ Runtime Auto-scale on demand;
- ❑ Monitor Event Target workload, dynamic adjust thread pool
- ❑ Dynamic adjust event consumer thread pool

# EventGrid FaaS Connectors

EventGrid Event Connectors as FaaS, auto-scale, save costs and deployment efforts

- ❑ Use FunctionGraph to deploy Source Connector and Sink Connector
- ❑ Each connector is single jar, upload & deploy
- ❑ FaaS provide auto-scale out-of-box, save compute cost
- ❑ Each source and target running in a function. Resource & process isolation

# Part 04

EventGrid Case Studies

# EventGrid + FunctionGraph Serverless EDA Solution

EventGrid + FunctionGraph provides decoupled, distributed Event-Driven Architecture. Integrating Cloud services using CloudEvents, building high performance cloud native serverless solution

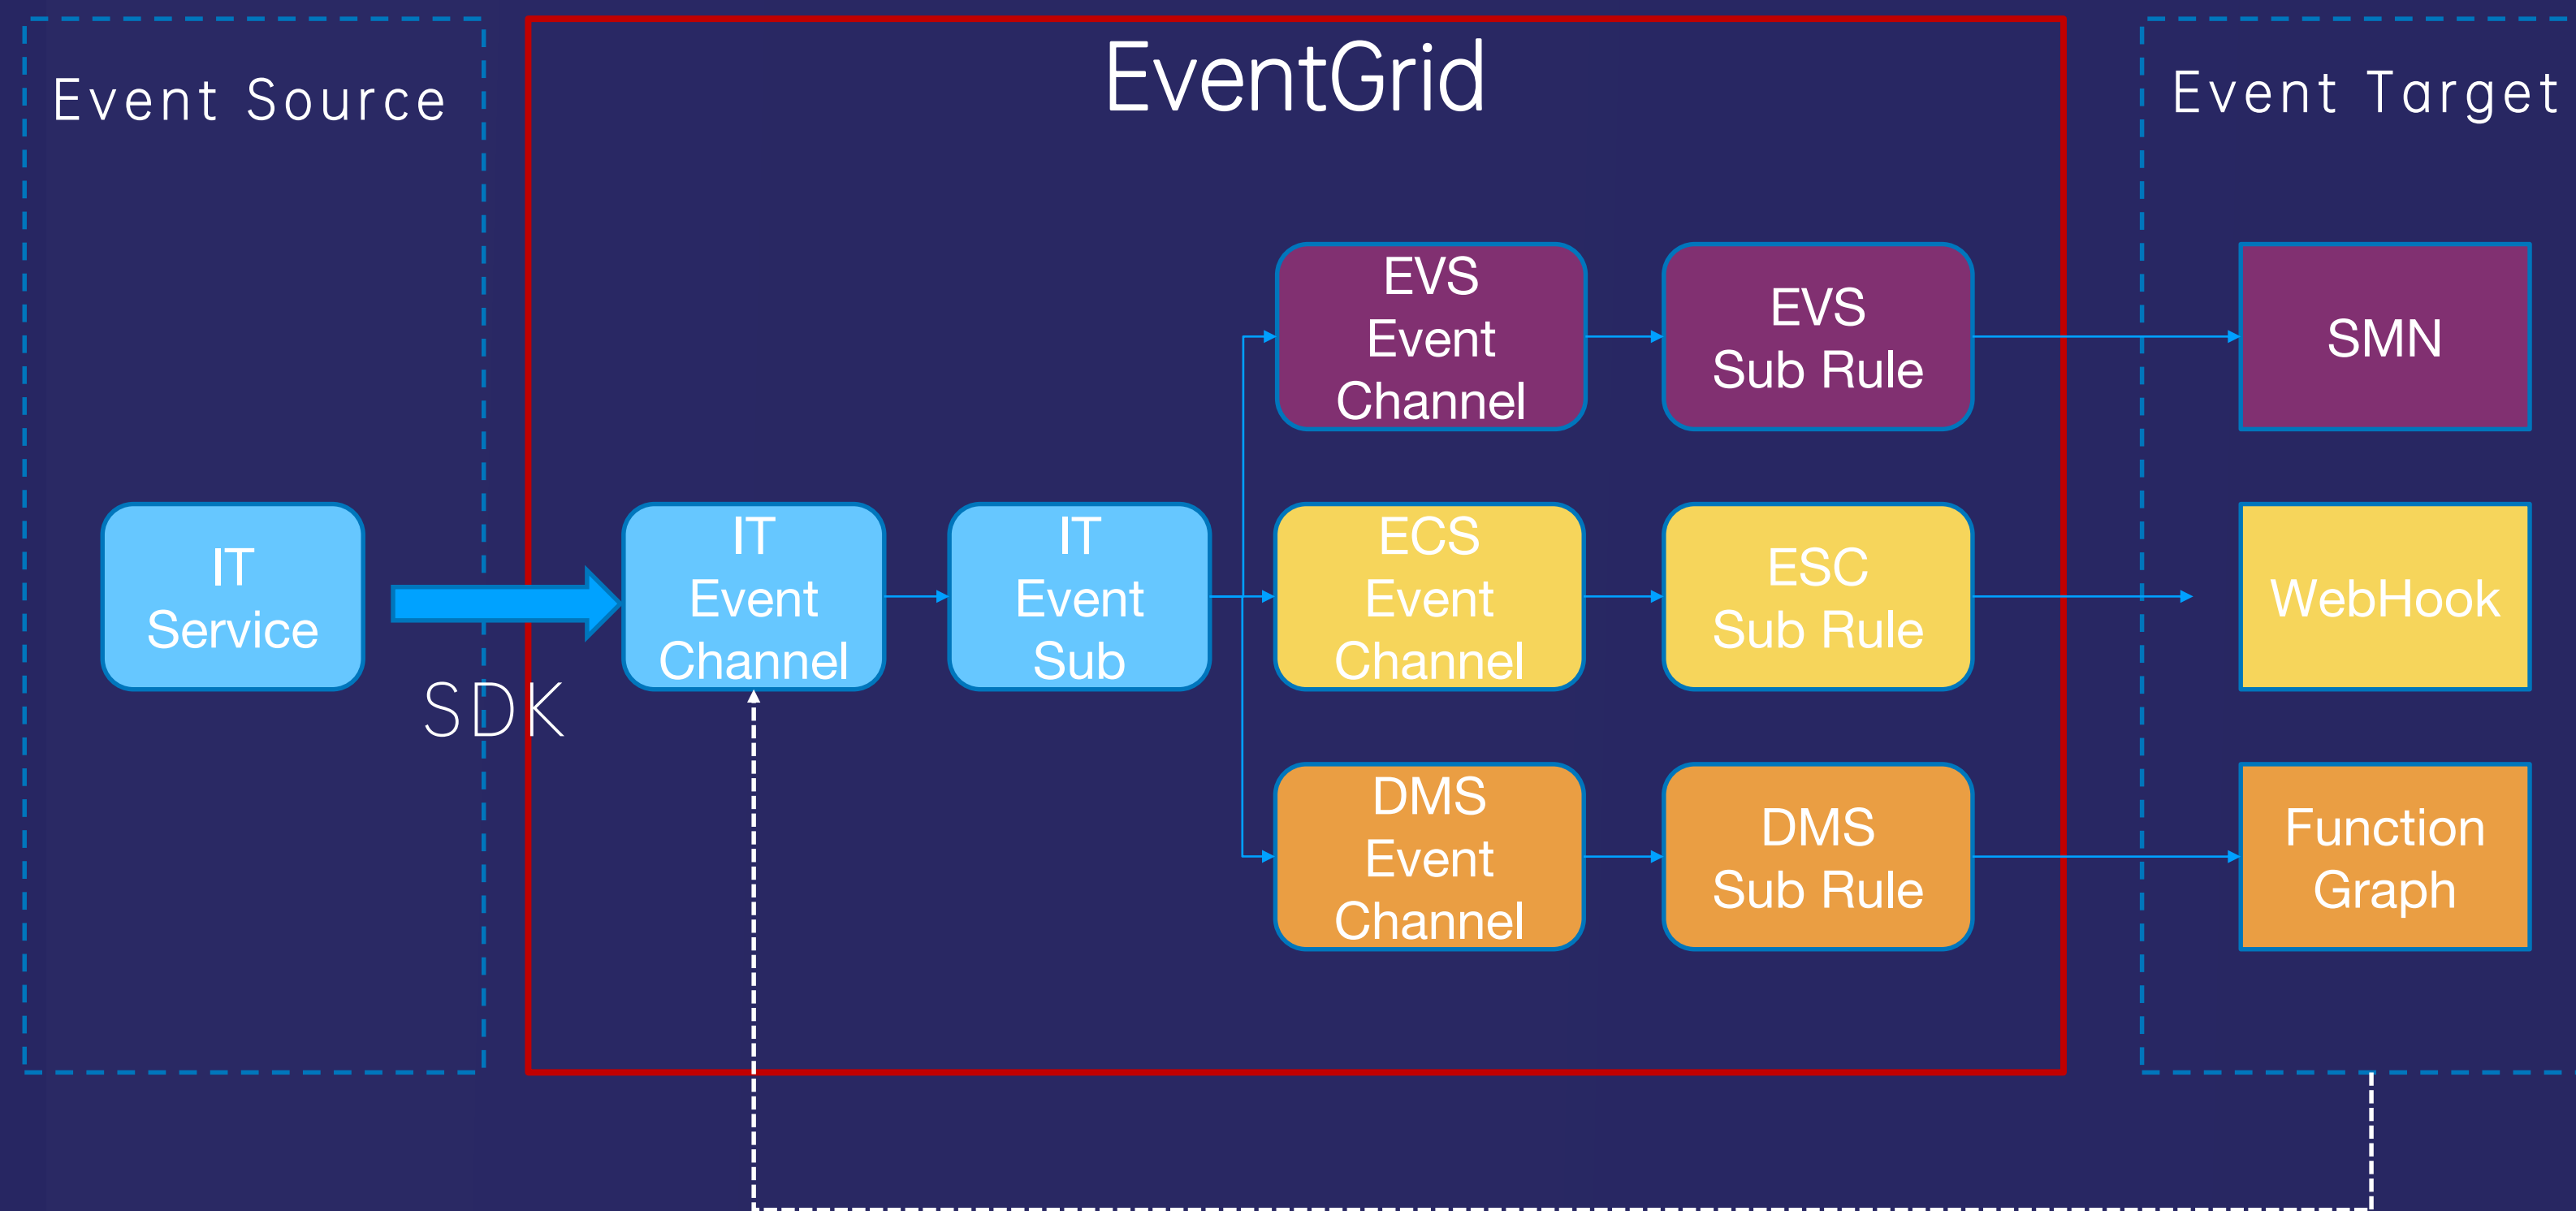

- ❑ EventGrid as central Event hub.
- ❑ EventGrid provides Event orchestration
- ❑ FunctionGraph as serverless compute.
- ❑ FunctionGraph provides service orchestration.

## Serverless EDA Solution Benefits

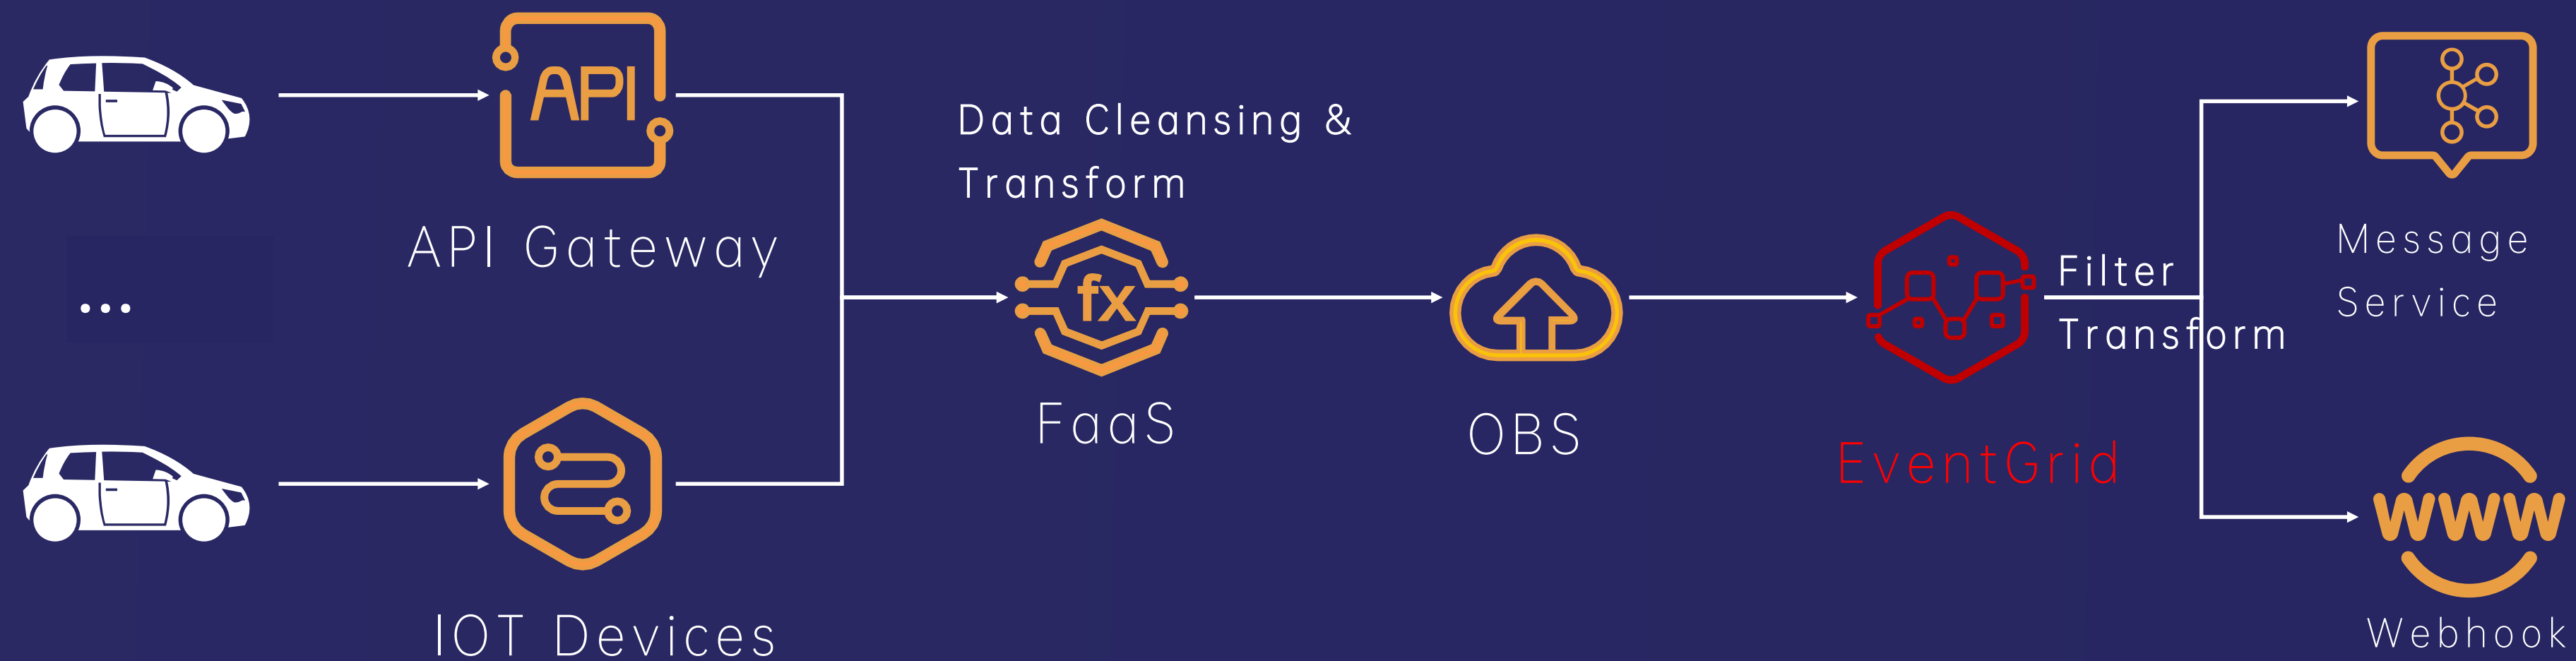

- ❑ Decouple of compute and orchestrate
- ❑ Async Execution
- ❑ Auto-scale & Extensible
- ❑ Agile & Low Code

# Case 1: EDA Cloud App & Service Integration

- ❑ Cloud Service Decoupling
- ❑ Async Event delivery
- ❑ One to many event delivery
- ❑ Standard Cloud Events
- ❑ Low-Code configuration: subscription, filter, router

# Case 2: Car IOT Serverless EDA Solution

## Customer Pain Points

- ❑ Time sensitive, high volume & workload
- ❑ Feature development with agility and high Time-to-market demand

## Customer Values

- ❑ Serverless architecture, auto-scale on demand
- ❑ Managed Cloud Services, reduce the DevOps complexity
- ❑ FaaS Pay-per-use, save the operation cost
- ❑ EDA routing, event distributed to the right business units

# EventGrid Roadmap

2022

- ❑ First GA in Huawei Cloud
- ❑ Support Custom Event Source
- ❑ Support Webhook as Event Target

2023

- ❑ Integrate 100+Huawei Cloud Services and Partner Cloud services
- ❑ Deploy in 10+Regions (China and Overseas)
- ❑ Support Dead letter Event delivery
- ❑ Support Event Tracing and Monitor

2024

- ❑ Explore Serverless EDA use cases
- ❑ Expand ecosystem, support more cloud services and SaaS partner Event Connectors
- ❑ Event Archive and Replay
- ❑ Continue to contribute and lead Apache EventMesh community
